4–9 September 2017 | Szent István University | Gödöllő, Hungary

URBAN MAPPING PRACTICAL

Sebastian van der Linden
with contributions from Akpona Okujeni
Humboldt-Universität zu Berlin

Study area

- City of Berlin, Germany
- 891,68 km²
- 3.52 Mio inhabitants
- 52° 31' N, 13° 24' O
- ~ 0.5 Mio street trees
- Extensive park areas and urban forests
- Abundant digital information freely available:
<http://fbinter.stadt-berlin.de/fb/>

Image data

- Sentinel-2A
- 04 July 2015
- 9 spectral bands at 20 m spatial resolution
- Level 2a after Sen2Cor preprocessing

Reference data

- High resolution municipal vector data was overlaid
- Soils were manually assigned
- Fraction impervious cover
- Fraction vegetation
- (Fraction tree/low vegetation)
- 20 m raster of Sentinel data

Reference data

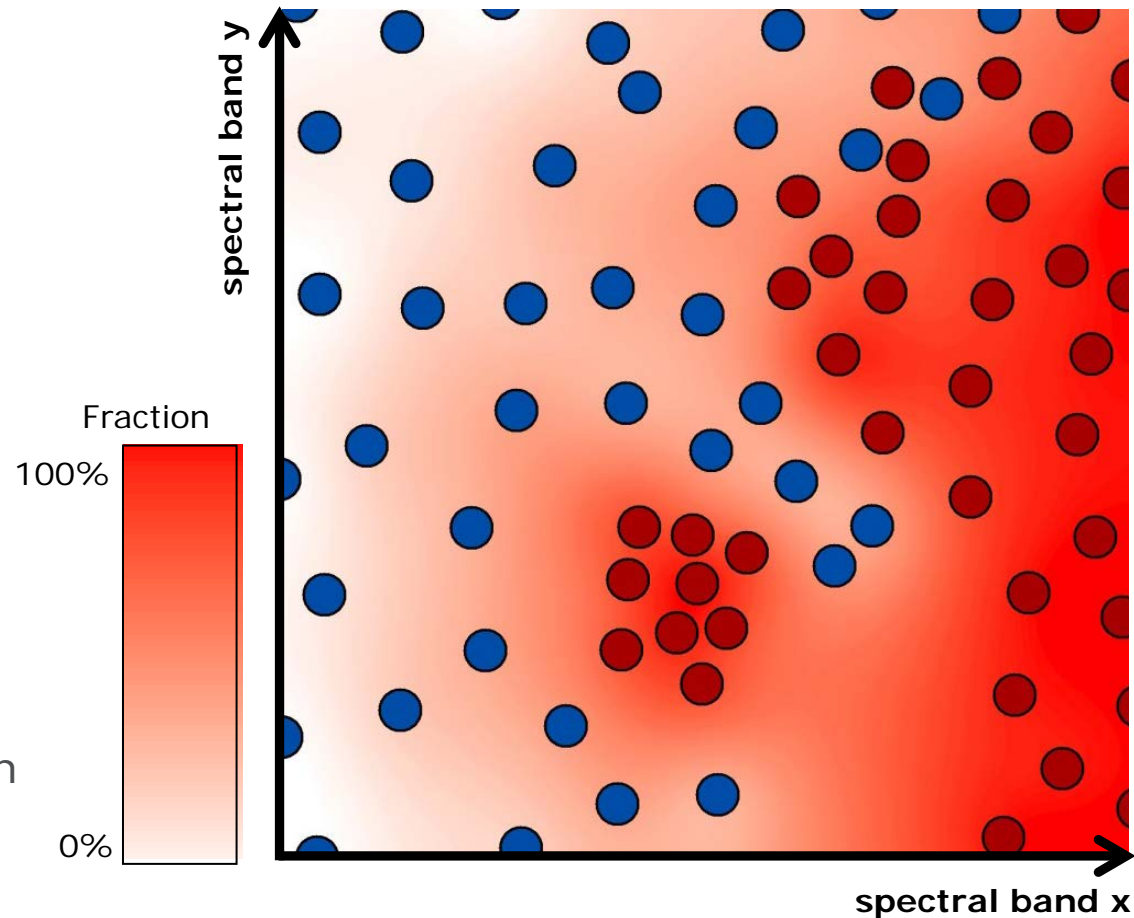

- High resolution municipal vector data was overlaid
- Soils were manually assigned
- Fraction impervious cover
- Fraction vegetation
- (Fraction tree/low vegetation)
- 20 m raster of Sentinel data

Example for vector-raster overlay (here 4 m)

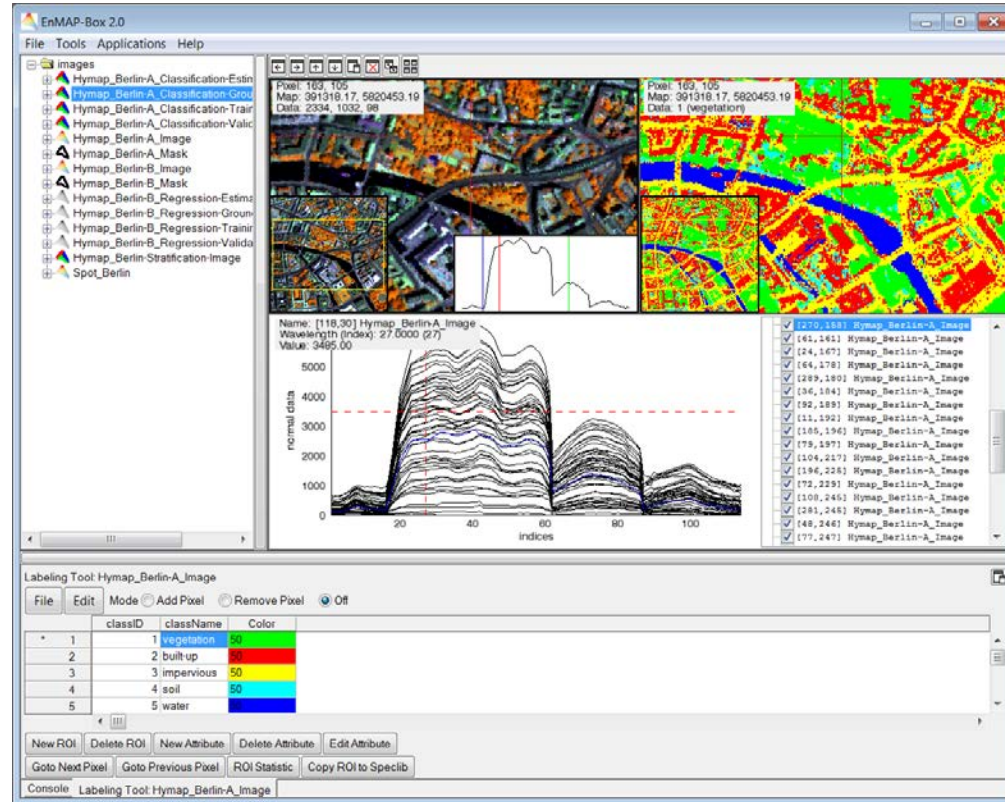

Methodology

- Reference data (fractions at pixel level) are used for training regression model
- Support vector regression (non-parametric, kernel-based) for mapping impervious and vegetation fraction
- Accuracy assessed using measure for quantitative evaluation: Root mean squared error (RMSE), Mean absolute error (MAE), etc.

Software

- EnMAP-Box 2.x (IDL Version)
- Free and open source
- www.enmap.org
- Starting with version 3 the EnMAP-Box will be delivered as Python plug-in for QGIS
